spellbook of jailbreak & agent vulnerabilities

<https://bkornpob.github.io/spellbook-of-jailbreak-and-agent-vulnerabilities>

this book follows a single thread. a successful jailbreak is iterative search: you mutate the input until the output shifts to match your intent. taxonomy is the methodology behind that search.

TAKE AWAYS

[agent-jailbreaking]

a process of making an aligned generative model **do things they are not supposed to do**

[search-problem]

jailbreak is a **search problem of an input-response function**

[days-scale]

after a new frontier model released, **minimum jailbreak time** recorded in scale of days

[innate-nofix]

jailbreak is a **built-in** vulnerabilities with the current ai architectures

[impact-scales]

with both **internal capabilities and external reaches**

[defense-in-depth]

eg **input, intent, and output**

[security-service-tradeoffs]

increase security constraints -> **expand refusal space, and reducing service** capabilities

[human-in-the-loop]

human intervention is still the **best defense** against novel-jailbreaks

Authorization & Scope Statement

"All demonstrations, exploit paths, and vulnerability evaluations referenced in this work were conducted within authorized testbeds, isolated lab sandboxes, or against publicly designated target environments. No unauthorized systems, production services, or unconsenting entities were targeted during this research."

Coordinated Disclosure Statement

"This research adheres to standard Coordinated Vulnerability Disclosure (CVD) principles. Any specific system vulnerabilities or zero-day vectors identified during testing were responsibly disclosed to the respective platform vendors prior to public release."

Dual-Use & Defensive Intent Statement

"While this session analyzes offensive mechanics and goal-hijacking vectors, these methodologies are presented through a dual-use lens. Understanding adversary tactics is a mandatory prerequisite for engineering resilient safety wards, system-prompt boundaries, and robust agent guardrails."

Responsibility Statement

"This presentation and its contents are delivered strictly for educational, defensive research, and security assessment purposes. All techniques, mutation frameworks, and case studies discussed are designed to identify systemic vulnerabilities, improve safety alignment, and strengthen agentic defense mechanisms within authorized boundaries."

Accountability Statement

"The author and presenters assume no liability for misuse or unintended consequences resulting from the execution of the methods described herein. Attendees and practitioners are solely accountable for ensuring that any application of these security techniques complies with applicable laws, ethical standards, and explicit organizational authorization."

the melody

jailbreak and
the hype

what is 'jailbreak'?

1700s

Physical Escape

Original meaning:
Forcible prison
escape

1990s

Unix 'chroot'

Breaking out of
sandboxed operating
systems

2007

iPhone App Store

Removing software
restrictions on mobile
devices

NOW

AI Agent Hijack

Making an AI agent to do
what it is not supposed
to do.

Today, our context is purely about the AI agent jailbreak

so, what does agent-jailbreak *look like*?

agent-jailbreak

Making an AI agent to do what
it is not supposed to do.

model-weight manipulation

black-box
context manipulation

OWASP Top 10 for LLM Applications 2026

<https://owasp.org/www-project-top-10-for-large-language-model-applications/>

jailbreak: a process that makes an aligned model or agent disregard its safety protocols and act against stated policies. OWASP LLM Top 10 defines in LLM01 that jailbreak is a *form of* **prompt injection**.

prompt injection (LLM01): attacker's input that alters model or agent behavior in unintended ways. OWASP LLM Top 10 2025 (LLM01) names two kinds – **direct** (the user's own prompt alters the model) and **indirect** (instructions hidden in external content the agent reads: web pages, files, email, RAG).

OWASP Top 10 For Agentic Applications 2026

OWASP Gen AI Security Project -
Agentic Security Initiative

<https://genai.owasp.org/resource/owasp-top-10-for-agentic-applications-for-2026/>

agent: software that **autonomously plans and acts** across tools, not a chatbot that only answers – so a hijacked goal redirects multi-step behavior and connected tools, not a single response.

agent goal hijack (ASI01): OWASP Top 10 for Agentic Applications 2026 (ASI01: Agent Goal Hijack) frames this as the wider category for any technique that redirects an agent's objectives, task selection, or decision pathways – not just its replies. **prompt injection is one technique** inside it; others include deceptive tool outputs, forged agent-to-agent messages, and poisoned external data.

Pliny the Liberator

Digital jailbreaker

by **Tharín Pillay**

PILLAY IS AN EDITORIAL FELLOW AT TIME.

*Photo-illustration by TIME*

"Pliny the Liberator" is an anonymous internet personality with a penchant for poking holes in billion-dollar AI systems. Despite a lack of prior coding experience, Pliny has built a reputation for finding techniques to make models misbehave—or, in the hacker's terms, to "liberate them"—mere hours after their release. Jailbreaking can involve things like eliciting what appears to be a recipe for fentanyl from ChatGPT, as Pliny did in a virtual demonstration for TIME in July. OpenAI did not respond to requests for comment in time for publication.

<https://time.com/collections/time100-ai-2025/7305870/pliny-the-liberator/>

OUR SHARED JOURNEY: UNDERSTANDING GENERATIVE AI CHALLENGES

1 AGENT-JAILBREAK

[agent-jailbreak]
A Process: Making a generative AI-agent model do what they are NOT supposed to. (Let's learn together!)

2 INNATE (No Easy Fix)

[innate-nofix]
Built-in: The vulnerability is inherent in current model architectures (latent-space-class-vuln). A challenge to explore.

3 IMPACT SCALES

[impact-scales]
Scaling Impact: Strength and blast radius increase with model capabilities and external reaches. Curious about the connections?

5 DEFENSE-IN-DEPTH

[defense-in-depth]
Multi-mode Watching: Input, intent, output. Improving effectiveness via joint guard layers. Let's build strong, layered communities.

5 HUMAN-IN-THE-LOOP

[human-in-the-loop]
Still the Best Defense: Against novel jailbreaks. Humans and AI working together, asking questions.

4 SEARCH & TIME

[search-problem-matter-of-time]
A Search Problem: It's an input-response function search. Given a static config, it's a matter of time (days-scale). How can we prepare?

6 ADVANCED DEFENSES

DDoJ & TELEMETRY

[DDoJ-and-spacetime-telemetry-aggregation]
Distributed Diffusion (DDoJ): Probes across reaches & times. Aggregating telemetry to detect developing vectors. Let's share insights.

D3 DEFENSE TRIAD

[D3-defense-triad]
Our Triad: Spacetime-Telemetry DETECTION, Dynamic-State DELAY, Security-State DISGUISE. The path to resilient and inviting technology.
